

Packet Capture Wireshark

PacNOG19

28th November - 2nd December 2016

Nadi, Fiji

Why we need to capture packet &
how it's related to security?

tcpdump Definition

tcpdump is a utility used to capture and analyze packets on network interfaces. Details about these packets can either be displayed to the screen or they can be saved to a file for later analysis. tcpdump utilizes the libpcap library for packet capturing.

tcpdump command example

```
# tcpdump -nni eth0
```

```
# tcpdump -nni eth0 host 10.10.10.10
```

```
# tcpdump -nni eth0 dst host 10.10.10.10 and proto tcp
```

```
# tcpdump -nni eth0 src net 10.10.10.0/24 and port tcp  
and portrange 1-1024
```

-nn = don't use DNS to resolve IPs and display port no

-i = interface to watch

dst = watch only traffic destined to a net, host or port

src = watch only traffic whose src is a net, host or port

net = specifies network

host = specifies host

port = specifies a port

proto = protocol ie tcp or udp

tcpdump command example

```
# tcpdump -nni eth0 -s0
```

```
# tcpdump -nni eth0 not port 22 -s0 -c 1000
```

```
# tcpdump -nni eth0 not port 22 and dst host 10.10.10.10  
and not src net 10.20.30.0/24
```

-s0 = setting samples length to 0 means use the required length to catch whole packet

-c = no to packets

tcpdump pcaps

```
# tcpdump -nni eth0 -w capture.pcap -vv -c 1000
```

```
# tcpdump -nni eth0 -r capture.pcap and port 80
```

-w capture.pcap = save capture packet to capture.pcap

-vv = display number of packet captured

-r capture.pcap = read capture file

-c = no to packets

tcpdump Output

```
IP 199.59.148.139.443 > 192.168.1.8.54343: Flags [P.],  
seq 53:106, ack 1, win 67, options [nop,nop,TS val  
854797891 ecr 376933204], length 53
```

```
IP 192.168.1.8.54343 > 199.59.148.139.443: Flags [.], ack  
106, win 4092, options [nop,nop,TS val 376934736 ecr  
854797891], length 0
```

```
IP 199.59.148.139.443 > 192.168.1.8.54343: Flags [P.],  
seq 106:159, ack 1, win 67, options [nop,nop,TS val  
854797891 ecr 376933204], length 53
```

```
IP 192.168.1.8.54343 > 199.59.148.139.443: Flags [.], ack

854797891], length 0
```

What is Wireshark?

- Wireshark is a network packet/protocol analyzer.
 - A network packet analyzer will try to capture network packets and tries to display that packet data as detailed as possible.
- Wireshark is perhaps one of the best open source packet analyzers available today for **UNIX** and **Windows**.

About Wireshark

- Formerly known as “Ethereal”
 - Author, Gerald Combs quit Network Integration Services
 - Free
- Requirement
 - Need to install winpcap
 - Latest wireshark installer contains winpcap, don't worry
 - (On Windows Vista) Need Administrator Privilege to capture
- GUI
 - Dramatically improved

Why Wireshark

- network administrators use it to **troubleshoot network problems**
- network security engineers use it to **examine security problems**
- developers use it to **debug protocol implementations**
- people use it to **learn network protocol** internals
- Wireshark isn't an intrusion detection system.
- Wireshark will not manipulate things on the network, it will only "measure" things from it.

How to Install

- Very straight forward
- Just double-click and follow the instructions.

Capture

The image displays the Wireshark network protocol analyzer interface. The main window is titled "Wireshark: Capture Interfaces". It features a table of available network interfaces for capture, with columns for Device, Description, IP, Packets, and Packets/s. The "en0" interface is selected, showing its IP as "fe80::bae8:56ff:fe25:b916" and 30 packets captured at 12 packets/s. Other interfaces like "bridge0", "en2", "p2p0", and "lo0" are listed with 0 packets. Below the table are buttons for Help, Start, Stop, Options, and Close.

Below the main window, the "Capture Filter" section is visible, showing a list of interfaces with checkboxes. The "Wi-Fi: en0" interface is checked, and its MAC address "fe80::bae8:56ff:fe25:b916" and IP "172.16.1.6" are displayed. Other interfaces include "Thunderbolt Bridge: ...", "Thunderbolt 1: en2", and "p2p0".

The "Capture Files" section shows a "File:" field with a "Browse..." button. It includes checkboxes for "Use multiple files" and "Use pcap-ng format". The "Next file every" field is set to 1 megabyte(s). The "Ring buffer with" field is set to 2 files. The "Stop capture after" field is set to 1 file(s).

The "Stop Capture Automatically After..." section shows checkboxes for stopping capture after 1 packet(s) or 1 megabyte(s).

The "Display Options" section includes checkboxes for "Update list of packets in real time", "Automatically scroll during live capture", and "Hide capture info dialog".

The "Name Resolution" section includes checkboxes for "Resolve MAC addresses", "Resolve network-layer names", and "Resolve transport-layer name".

The "Use external network name resolver" checkbox is also present.

Filters

- Capture filter
 - Capture Traffic that match capture filter rule
 - save disk space
 - prevent packet loss
- Display filter
- Tweak appearance

Apply Filters

- `ip.addr == 10.0.0.1` [Sets a filter for any packet with 10.0.0.1, as either the source or dest]
- `ip.addr==10.0.0.1 && ip.addr==10.0.0.2` [sets a conversation filter between the two defined IP addresses]
- `http or dns` [sets a filter to display all http and dns]
- `tcp.port==4000` [sets a filter for any TCP packet with 4000 as a source or dest port]
- `tcp.flags.reset==1` [displays all TCP resets]
- `http.request` [displays all HTTP GET requests]
- `tcp contains rviews` [displays all TCP packets that contain the word 'reviews'. Excellent when searching on a specific string or user ID]
- `!(arp or icmp or dns)` [masks out arp, icmp, dns, or whatever other protocols may be background noise. Allowing you to focus on the traffic of interest]

Follow TCP Stream

The image shows the Wireshark network protocol analyzer interface. The main pane displays a list of captured packets. A right-click context menu is open over packet 118, with the 'Follow TCP Stream' option highlighted. The packet list shows various protocols including BJNP, SIP, CLASSIC-S, UDP, and TELNET. The packet details pane on the left shows the structure of packet 118, including Ethernet II, Internet Protocol Version 4, Transmission Control Protocol, and Telnet. The packet bytes pane at the bottom shows the raw data in hexadecimal and ASCII.

Need CLI?

- If you stick to character based interface, try tshark.exe
- C:\program files\wireshark\tshark.exe

Tcpdump & Wireshark

- `tcpdump -i <interface> -s 65535 -w <some-file>`

Exercise

- Install Wireshark into your PC
- Run wireshark and Capture inbound/outbound traffic
- Download capture files from
 - Follow the instructor's guide.

Exercise 1: Good Old Telnet

- File
 - telnet.pcap
- Question
 - Reconstruct the telnet session.
- Q1: Who logged into 192.168.0.1
 - Username _____, Password _____ .
- Q2: After logged in what did the user do?
 - Tip
 - telnet traffic is not secure

Exercise 2: Massive TCP SYN

- File
 - massivesyn1.pcap and massivesyn2.pcap
- Question
 - Point the difference with them.
- Q1: massivesyn1.pcap is a _____ attempt.
- Q2: massivesyn2.pcap is a _____ attempt.
- Tip
 - Pay attention to Src IP

Exercise 3: Chatty Employees

- File
 - chat.dmp
- Question
- Q1: What kind protocol is used? _____
- Q2: This is conversation between _____@hotmail.com and _____@hotmail.com
- Q3: What do they say about you(sysadmin)?
- Tip
 - Your chat can be monitored by network admin.

Exercise 4: Suspicious FTP activity

- File
 - ftp1.pcap
- Question
 - Q1: 10.121.70.151 is FTP _____ .
 - Q2: 10.234.125.254 is FTP _____ .
 - Q3: FTP Err Code 530 means _____ .
 - Q4: 10.234.125.254 attempt _____.
- Tip
 - How many login error occur within a minute?

Exercise 5: Unidentified Traffic

- File
 - Foobar.pcap
- Question
